PROSPECTUS

Brooks Hudson Silver Mining Company **LIMITED**

INCORPORATORS

The original incorporators of the Company were Thomas H. Brooks, of New Liskeard, Mining Engineer, who subscribed for 50,000 shares; C. H. Fullerton, of New Liskeard, Ontario Land Surveyor, who subscribed for 2,000 shares; Murdock McLeod, of New Liskeard, Mining Broker, who subscribed for 2,000 shares; William Gottlieb Otto, of the Village of Vars, Ontario, Jeweler, who subscribed for 2,000 shares; Frank W. Haynes, of the said Town of New Liskeard, Real Estate Agent, who subscribed for 2,000 shares; J. B. Stallwood, of New Liskeard, Physician, who subscribed for 2,000 shares; Joseph Walsh, of the Village of Bearbrook, Machine Agent, who subscribed for 2,000 shares.

The above shares have been supplied on account of the amount of stock due each of them for the assignment of the Company to the properties as hereinafter mentioned.

QUALIFICATION AND REMUNERATION OF DIRECTORS

The By-laws of the Company provide that the Company shall be managed by a Board of seven Directors, each of whom shall be the owner of at least one hundred shares of the capital stock of the Company, and the Directors shall receive such remuneration for their services as the shareholders at any annual general meeting shall decide.

DIRECTORS

Thomas H. Brooks, of New Liskeard, Mining Engineer; Murdock McLeod, of New Liskeard, Mining Broker; J. B. Stallwood, of New Liskeard, Physician; William G. Otto, of Vars, Jeweler; Frank W. Haynes, of New Liskeard, Real Estate Agent; Charles H. Fullerton, of New Liskeard, Ontario Land Surveyor; and Joseph Walsh, of Bearbrook, Machine Agent.

SUBSCRIPTIONS UPON WHICH ALLOTMENT MAY PROCEED

The minimum subscription on which the Directors may proceed to allotment shall be twenty-five shares and the amount payable on application and allotment of each share shall be the full subscription price.

All subscriptions shall be paid for in full at the time of allotment and no calls will be made thereafter.

SHARES ALLOTTED FOR OTHER THAN CASH CONSIDERATION

The Company acquired its twenty-two mining locations from a syndicate in consideration of 200,000 fully paid up shares of the Company, such shares to be issued immediately upon the transfer of the mining properties to the Company. These transfers were duly completed and shares issued accordingly.

VENDORS OF PROPERTY TO THE COMPANY

It was agreed before the incorporation of the Company that the Syndicate composed of

No. 1 Gauley, W. G.....Vars, Ont.	No. 15 Reay, Wm. G.....New Liskeard, Ont.
“ 2 Whitley, Fred.....“	“ 16 Smiley, F. L.....“
“ 3 Lowe, Wm. J.....Bearbrook, Ont.	“ 17 McLeod, M.....“
“ 4 York, Mary Ann.....North Bay, Ont.	“ 18 Rogers, Stephen.....“
“ 5 Walsh, Jos.....Bearbrook, Ont.	“ 19 McRoberts, E.....Stratford, Ont.
“ 6 Fetterly, Lindsay...Vars, Ont.	“ 20 Lunan, D.....New Liskeard, Ont.
“ 7 Otto, W. G.....“	“ 21 Whyte, Jas. E.....“
“ 8 Baer, Jno. C.....New Liskeard, Ont.	“ 22 Daniels, A.....Toronto, Ont.
“ 9 Elliott, Humphrey...“	“ 23 McKelvie, A. A.....New Liskeard, Ont.
“ 10 Fullerton, C. H.....“	“ 24 McKelvie, Dan.....“
“ 11 Cockburn, G. A.....Ottawa, Ont.	“ 25 Armstrong, Reub.....“
“ 12 Stallwood, J. B.....New Liskeard, Ont.	“ 26 Hartman, H.....“
“ 13 Haynes, F. W.....“	“ 27 Brooks, T. H.....“
“ 14 Reay, A. A.....“	“ 28 Beaumolt, B.....“

should transfer to the Company the mining properties held by Mr. T. H. Brooks in trust for them in consideration of the issue to the Syndicate of 200,000 fully paid up shares of the capital stock of the Company. No amount was subscribed in the agreement or determined upon by the parties as being payable for good will as distinguished from the balance of the property so transferred.

COMMISSION

The Directors have agreed to pay 15% commission as brokerage to its fiscal agents for procuring subscriptions for the first allotment of 50,000 shares.

PRELIMINARY EXPENSES

The preliminary expenses were all borne by the vendors of the properties.

PROMOTERS' REMUNERATION

Nothing has been paid by the Company, nor does the Company intend to pay anything to any promoter.

AUDITOR

MR. R. P. RICHARDSON, of New Liskeard, Mining Broker.

THE INTEREST OF DIRECTORS IN PROPERTY

No Director has any interest in any property proposed to be acquired by the Company or in the property now acquired by the Company except such interest as he may have by reason of his holding stock in the Company and as one of the Syndicate from whom the properties of the Company were acquired, and nothing has been paid or agreed to be paid by any Director either in cash or shares by any person either to qualify such person as a Director or otherwise for service rendered by him in connection with the formation of the Company.

The properties consist of 840 acres of mineral lands, namely:

OFFICERS ELECTED

T. H. BROOKS, President and Man. Director. MURDOCK MCLEOD, Vice-President.

W. G. OTTO, Secretary-Treasurer.

LOCATION OF PROPERTY

The property is accessible from the Town of New Liskeard, the nearest railway station, by Government Road, which passes within one-half mile of several of the mining claims acquired by this Company. The other mining claims are within two miles of the said road.

A stream flows through the Company's property, from which a sufficient amount of water is available for the concentration of the ore.

There is sufficient timber on the property for mining and fuel purposes for many years.

Four test shafts have been sunk on the property of depths varying from ten to twenty feet, all carrying mineral, consisting principally of copper sulphite, silver and gold.

Samples taken from the surface give satisfactory assays in both copper and silver.

Dated at New Liskeard this 28th day of January, 1907.

Brooks Hudson Silver Mining Co., Limited.

NO single industry in the world is now paying as large a profit on the amount of money invested as the copper industry! No single field of activity is making fortunes so rapidly! Do you know why? No; well I will tell you.

During the last score of years the copper mines in the United States and Mexico have paid in actual dividends \$300,000,000.00. Since January 1st of this year, ten copper companies alone have distributed in earnings nearly \$19,000,000.00. The fact is that **copper mines are paying one-half of the total dividends paid by the entire mining industry.** Try to realize this, try to remember this, and you will understand why Standard Oil men were so anxious to come in on copper that even Thomas Lawson, the great Canadian financier in Boston, had to let them have his child in copper, the amalgamated.

The mining of copper is making more millionaires than any other industry in the world, and is making them quicker. One mine in Arizona is paying annually \$10,000,000.00 in profits and has made millionaires of its stockholders. Several other copper mines are paying from 100% to 3,300% on an investment made only a few years ago. The man who invested \$1,000.00 in the Calumet

and Arizona 4 years ago, now has a snug fortune worth \$33,000.00 and is receiving in annual dividends the sum of \$4,800.00.

No other metal is in such demand in the whole world as is copper. The enormous increase in the consumption and the rise in price of this metal have been coincident with the vast extension of the uses of electricity throughout the world. The consumption of brass is growing rapidly and brass is two-thirds copper. **The growing consumption of this metal can bring about but one result, and that is the continued rise in the price of copper and rapidly growing profits to those who own stock in copper mines.**

These are vital facts to those who wish to make investments that will pay **certain** profits and the **largest** profits possible. A copper mine is a plain commercial proposition, not a speculation.

To make large profits on a small outlay of money in copper, one should purchase shares from a company which has just begun operations, but which has **large** deposits of the metal, and which is selling its shares at a low price in order to obtain funds to purchase equipment and enlarge its operations. After it begins earning money from its own production, the stock in such a company cannot be bought excepting at a very high price.

There is money in mining, especially in the Cobalt camp, and this Company offers only stock of the original issue. It has not been watered, and although more property has been added since the Company was incorporated, the capital issue has not been raised.

We are not floating a stock-jobbing proposition, but a real mine.

You may be more thoroughly convinced of the profits to be made from copper mining by taking into consideration mines right at home, which we all know well, at least by name. We refer to the Sudbury mines. Oh! Yes, but they are nickel mines, you will answer. True; at least they

are called thus, but let us delve into some of the scanty facts which the operating company have been unable to hide, however desirable it may have been to do so. Copper is a very extensive by-product—so great a one, in fact, that were no nickel whatever saved from the Sudbury ores the copper alone, at present market prices, would return handsome profits. Most probably the ores yield about the same percentage of copper—70 lbs. per ton—as is secured from the rock of the Calumet and Hecla mines. This supposition is based on extensive assays from a neighboring property, the least productive assay of which has given 68 lbs. of copper to the ton.

The Sudbury ores are matted at the mines and the matte shipped to U.S. for smelting, and upon this point many very sharp differences of opinion arise between the owners of the mines and the Canadian Officials. It is easily understood that the Company will not report their expenses less than is really incurred, and as easily understood that they are not disposed to report their profit too high. A few years ago the Sudbury company reported an expenditure of nearly \$400,000.00, and gave their ostensible profit as \$950,000.00. But the Bureau of Mines, adducing custom house figures, inferred publicly that the actual mineral production was nearly double what the company reported or more than \$1,500,000. Be that as it may: At any rate the comfortable fact remains that Sudbury, at the lowest calculation of profits, ranked among the fifty most profitable mines of the world, a truth which does more to establish the mineral values of Northern Canada than tons of printed documents.

We have, in the above, said a good deal about copper because we believe, that what we intend to say about silver will be better understood and valued when first the older question about copper mining is fully grasped.

In the earlier days, that is less than a year ago and to some extent even to-day, it was assumed that the silver producing area was mainly confined to Coleman Township, and even there to the

conglomerates and slates. Fortunately the past summer's work has proven these assumptions incorrect. On the face of it, it seems too ridiculous for anyone to believe that a set of arbitrarily drawn lines should happen to fall in such a manner that all of the good silver producing area would be bounded by them, even if the known facts of to-day did not tell otherwise. The earliest supposition in regard to where silver would be found and in what kind of rock is now known to have also been a mistaken one.

The best mining men have been puzzled when they first visited Cobalt, and while various theories have been advanced, it must be borne in mind, that at the best they are only plausible theories and no more! The only real certain thing which can be said is, that "silver is found where it is deposited."

It would be useless and serve no good purpose to here give any theory about where silver is to be found. Suffice it to say that native silver in as good and as rich leads as any in Coleman Township is to-day known in the following places: To the East in "Casey", to the North in "Sharpe," to the West (7 miles West of "Auld") in "Temagami Forest Reserve" and to the South in "Lorraine." Look it up on your map, and you will find that the rich silver bearing area has to-day a size of many square miles, and probably more will be added this year.

Coming now to the promised reference of silver to copper, you will get a pretty good idea about it all when you know that a given weight of silver is worth forty to forty-five times as much as a given weight of copper. Therefore a 3-inch vein which will run one-third silver contains as much in gross value as a 12 foot vein of ore which will run 25 per cent. in copper. Try to realize this, try to understand what it means, and then remember that such a good copper vein is not known either in Canada, the United States or Mexico. Now in regard to the mining of such two veins. It is

true that the cost of mining a twelve-foot vein of copper might not be more than one-fortieth as much per ton as the cost of mining a 3-inch silver vein, but—it would cost 40 times as much to handle the product, 40 times as much for freight, and at least 30 times as much for smelting, refining and marketing the product.

We showed you in the above how very profitable copper mining has proved to be. Do you realize by now how very little silver you really need to have to compare favorably with copper? We have shown you that the Sudbury mines pay a handsome dividend on 70 lbs. per ton or $3\frac{1}{2}\%$ copper. Less than ONE ounce of silver in the same lead would pay as much more!!!

That being the case, can you doubt any longer that the opportunity offered you by the Brooks Hudson Silver Mining Co., Limited, is an excellent one?

It was a wise man who said "When you invest in the stock of a company don't look for the best, for you will never find it. Look for a good one and then act quickly. Don't wait to see if it pans out all right, for that is where you lose your opportunity. When you have waited to see if it pans out all right, you will have to pay a premium on the stock and you will have lost the biggest advance in value. If the men at the helm are good sound business men or men of good standing, then trust them to do the same for their mining venture as they have done for their own private enterprise. You must make money on your judgment and foresight, and not on demonstrated facts."

Now don't take Tom's or Dick's or Harry's, or our word, nay don't take anyone's for the facts. Enquire, scrutinize, examine—the proposition will stand any investigation. Send for information—ask any questions you like. But act **NOW**—to-day, or you will be sorry to-morrow!

REPORT

In accordance with your request to me I have tried to get as good an idea as possible about the properties which now belong to the Brooks Hudson Silver Mining Co., Limited. The large acreage of the claims you have and the lateness of the season has prevented as close and thorough an examination as would have been desirable and necessary to give you a full and complete report. For these reasons I have been obliged to confine myself to a more general description of what I have seen, and while the following of course cannot claim to be a full and accurate report it will at least serve to explain in a general way, the country and its apparent possibilities.

Both to the north and to the south of the Third Concession of Hudson, the country rock generally speaking is a nearly flat lying slate belonging to the lower Huronian age. Between these and terminating on lot 5, that is: 2 miles from the East boundary of Hudson, runs a series of ridges 60 feet high, with a general strike of about North 80 East, and cut on lot 5 by another series of ridges running about North Northeast, and again at about lot 9. All of these first named ridges appear to be of undoubted igneous origin, and being furthermore plutonic rocks are rather coarse crystalline, but those cutting them in or about lot 5 are much finer and closer grained. The first named must be classified as mainly gabbro, while the latter are a trap, but in them both are many dykes of diabase and the closely related melaphyr.

All of these eruptive rocks have been extensively fissured and jointed, and it is in these fissures, which often attain great width, that the more acid rocks which constitute the gangue of the numerous and generally quite richly mineralized veins occur. But in addition to this must not be forgotten

the finely banded slates so typical of silver in this country, and, especially in the western end, the always promising sphalerite (black Jack), which seldom promises what it does not keep.

Leaving now the more general character of the country, I must admit that I repeatedly was surprised to see how really rich the gangue, in the many veins already discovered, proved to be. It mainly consisted of copper sulphides, but with just enough iron sulphides to make it a first class ore as far as easy smelting is concerned, and also to show that more precious metals as primarily silver might with confidence be expected.

One thing quite certain is, that your Company has a large number of veins rich in copper ores of various kinds, so large that no dead work need ever be done, and so rich that it will not come below 6%. Another thing seems to be certain also, that on several of your claims silver in paying quantities will be found.

The claims are admirably situated as far as transport is concerned and all near to already existing good roads, and all have plenty of timber for mining and building purposes.

I wish to add that a little more work will, without any doubt, disclose many more leads carrying minerals in paying quantities, and that especially the two cross belts on lots 5 and 9, respectively, give promise of very much more than the easterly and westerly running ridges.

It will be a pleasure to me to go more closely into these matters as soon as time and season will allow; in the meantime you may feel certain that what you have will prove to be mining claims of no mean rank, and claims worthy of confidence.

JACOB M. EGGERT, M.E.,
New Liskeard, 1907.

We have for sale a few shares—and we mean a **FEW** shares—of the Brooks Hudson Silver Mining Company, Limited. The par value is One Dollar a share.

The Company's entire capital is only \$500,000.00, which is distinctly a novelty in these days of huge and inflated capitalizations. Brooks Hudson Silver deliberately kept its stock issue down to a low figure, because its management believes in paying large dividends on a small capital stock issue rather than in small dividends on a big one.

We propose to sell the few shares of "Brooks Hudson Silver Mining Company, Limited" we have at \$1.00 a share, fully paid and non-assessable, and we propose to sell these shares quickly.

These shares are fully paid, are not subject to any assessment whatever, and the holder of them incurs absolutely no personal liability.

"Brooks Hudson Silver Mining Company, Limited" is officered and directed by men who really do direct. To make profits and earn dividends for themselves they must make money for the stockholders.

Study this proposition—consider it—and rush your order by telegram AT OUR EXPENSE!
