

ACCESSING THE GREEN ECONOMY WORKSHOP

*“Good health is closely tied to factors such as healthcare access, stable housing, financial resources, and water and food security. Exposure to climate and environmental hazards varies from place to place and is influenced by race, income, and job opportunities. Sensitivity to hazards is influenced by social and economic conditions”.* (<https://climateinstitute.ca/reports/the-health-costs-of-climate-change/>)

THINK AND SHARE

What are ways that age, income, education, race, literacy, and working conditions may affect someone’s exposure to climate change? In a group of 4-5, each person can take 1-2 factors and come up with why this factor may put someone more at risk for climate change. Come together and discuss your answers.

**My Risk Factor:** \_\_\_\_\_

**Why this factor may be of concern:**

**List 1-2 key points from your group discussion**
